Water Accounts: From NC Accounts to policy decision making

Water Accounts: SEEA Water Framework

Water Accounts: Components of PSUT

From NC Accounts to policy decision making

Water Account findings

Analysis of water availability, sustainable withdrawals/abstraction and use efficiency

Proposed policy decisions/ interventions

- Development plans and budgets more focused on water efficiency improvements;
- Contribution to Rwanda's SDG 6.4 monitoring and reporting (WUE, Water Stress)
- New technologies and practices for water resources management should be thought about in time, to increase food security rather than using traditional methods (rain-fed)
- Improved mandates and coordination for managing cross sector water allocation needs.

From NC Accounts to policy decision making

Water Account findings

Water revenue, values, competition and pricing policies

Proposed policy decisions/ interventions

- Support and advance discussion of water utility cost recovery needs (WASAC, RURA); financing for investment (MINECOFIN, MININFRA, FONERWA)
- Improved policies on water pricing, cost recovery; resources for watershed and water resource management

From NC Accounts to policy decision making

Water Account findings

Systemic data
coordination needs

Proposed policy decisions/ interventions

- Support policy decisions related to information data sharing, innovations, protocols between ministries and agencies;
- Promotion of better quality, integrated data for cross sector decision making

From NC Accounts to policy decision making

Water Account findings

Capacity Building, skills
and Partnership

Proposed policy decisions/ interventions

- upgrading and focusing discussion of water challenges and solutions;
- Increased stakeholders (e.g. development partners, CSOs, PS) attention and funding to water sector issues.
